AI for network, Edge AI

Interests:
- Middle ground, stochastic block models for network pattern analysis ==> it's explainable
- Fully AI automated ==> efficiency
- AI for network systems
- System/network for AI

Concerns:
- Fall-back mechanism is missing (versus flight control)
- LLM in hype curve max
- Federated learning: personalization & privacy (google typing, hospital)
- Business incentives are not fully clear
- Edge AI needs expectation management

Outlook:
- Explainability is important, as well as Accountability
- Larger models   versus   smaller devices
