Jörg Ott

- TUM, CS, Chair of Connected Mobility

Some current interests

- Internet transport protocols and QUIC
  - Real-time, multipath
  - QUIC-based overlays

- (LEO) satellite networks
  - Performance, perspectives, opportunities

- Edge and in-network computing
  - Application (de)composition and distribution
  - Exploring different languages and flavors of "virtualization"
  - Orchestration

- Non-tech: ethics

Questions

- ## What can we do with QUIC as a building block?

  – Part of something bigger (beyond H3)?

- ## How do we integrate LEO networks?

  – Understanding performance and variability

  – Path control logic?

  – How much do you want to / need to know?

- ## Internet access obstacles

  – Bias towards the fast side?
