Hendrik Cech

<hendrik.cech@tum.de>
Researcher and PhD Student
Chair of Connected Mobility, TUM

Research Interests

- LEO Satellite Networks: currently especially Starlink
- Transport Protocol Performance
- Multipath Transport: MPQUIC, performance measurements

Transport-layer optimizations for LEO (Starlink) connections

- rapidly changing latency and bandwidth on a predictable schedule
- frequent single packet losses
- loss-based CC performs poorly, model-based (BBR) much better
 - Issue: slow start
