Justus Fries

PhD Student at Chair of Connected Mobility

Research topics and work:

- Web performance and privacy (Website Fingerprinting!)

- Low-end Internet connectivity

- Transport mechanisms for 5G and LEO (handovers)

Open Questions

- Do you notice the trade-off between performance and privacy/security in everyday life?

- Would you prefer explicit logins everywhere over covert fingerprinting?

- Have you experienced unbearably slow (low-end) Internet today? Which tools did you use for troubleshooting?

- Should network research papers start evaluating the most used client-side protocol implementations (e.g., Google QUICHE, non-Linux TCP) as opposed to the easy-to-modify implementations?
