Johannes Zirngibl

About Me

- Post-doc at the MPI for Informatics
- PhD at TUM
- B.Sc. & M.Sc. Informatics at TUM

Research Interests

- Transport protocols and paradigms
  - Client behavior given new protocols
  - Service adoption to new protocols
- QUIC
  - Detection of deployments
  - Identification of libraries
- Internet-wide Measurements

Questions for Discussion

How does Happy Eyeballs develop?
- Which applications implement new ideas and how?
- Will it be adapted by other clients, e.g., DNS?
- How can we measure the development?

How does QUIC shape the future Internet?
- Which libraries, functionality and parameters are actually used?
- Which protocols are implemented on top of QUIC?
- How can we measure future changes?
