October 22, 29 & November 5, 2013

Glocal Control for Hierarchical Dynamical Systems

**Theoretical Foundations with
Applications in Energy Networks**

Shinji HARA
The University of Tokyo, Japan

OUTLINE

1. Glocal Control & Energy Networks
2. A Unified Framework for Networked Dynamical Systems with Stability Analysis
3. From Homogeneous to Heterogeneous
4. From Flat to Hierarchical
5. Decentralized Hierarchical Control Synthesis
6. Applications in Energy Networks

OUTLINE : Part 1

1. Glocal Control & Energy Networks

- **Glocal Control (background, idea, goal)**
- **Urban Heat Island Problem**
- **Integrated Energy Networks**

Why “Glocal Control” ?

Recently, systems to be treated in various fields of engineering including control have become large and complex, and more high level control such as adaptation against changes of environments for open systems is required. Typical examples include meteorological phenomena and bio systems, where our available actions of measurement and control are restricted locally although our main purpose is to achieve the desired global behaviors.

This motivates us to develop a **new research area** so called "**Glocal Control**," which means that the **desired global behavior is achieved by only local actions.**

Future Direction in Control

Realization of High Quality Products
 → Solving Social Problems such as
 Energy, Environments, and Medicine

Meteorological Phenomena

Bio-systems

Energy NWS

Transportation

Multiple Functions

Hybrid Control

High Performance

Robust Control

Linear motor car

Automation

Modern Control

Engine control

Stabilization

Classical Control

Robotics
Aerospace

Mechatronics

Steel process

Chemical process

Glocal Control

Watt

Urban Heat Island Problem

Local Actions of Measurement & Control

Scale of buildings and roads

Realization of Global Desired Environment of a Whole City

Glocal Control

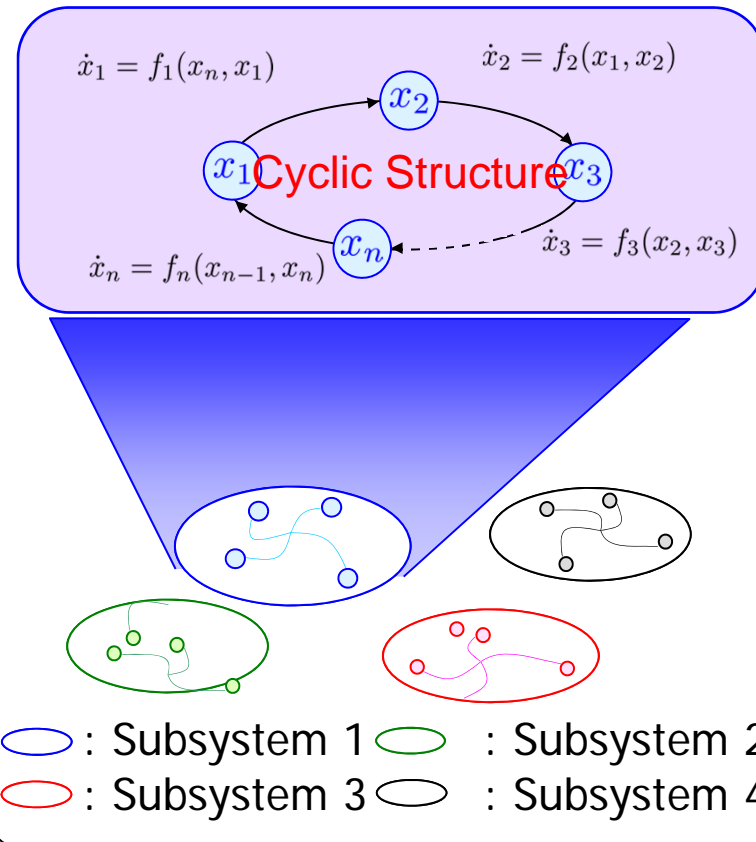

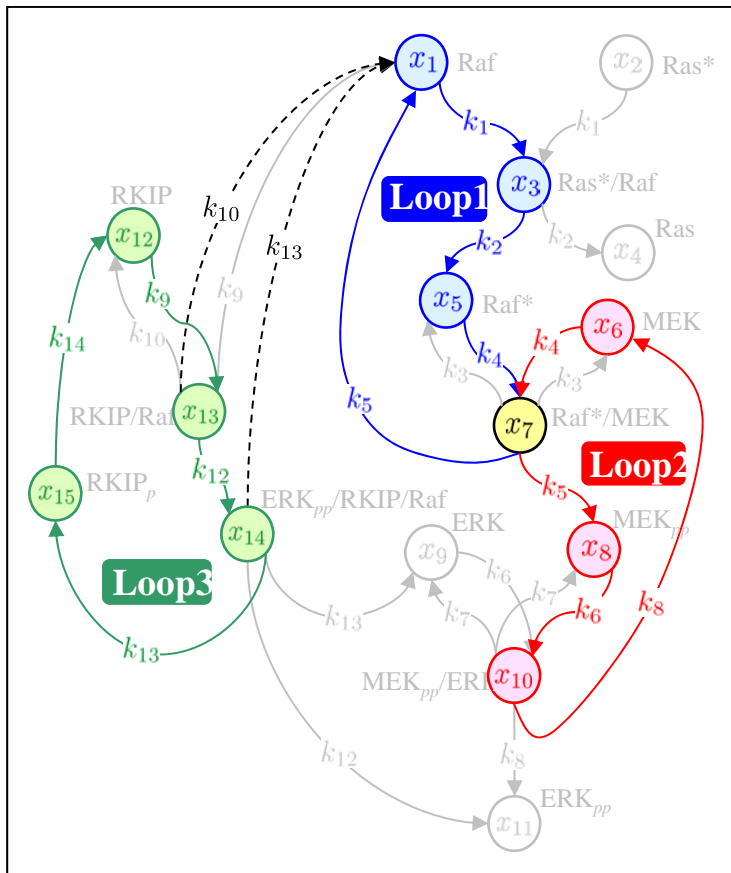

Scale of residential and business areas

Scale of districts/towns

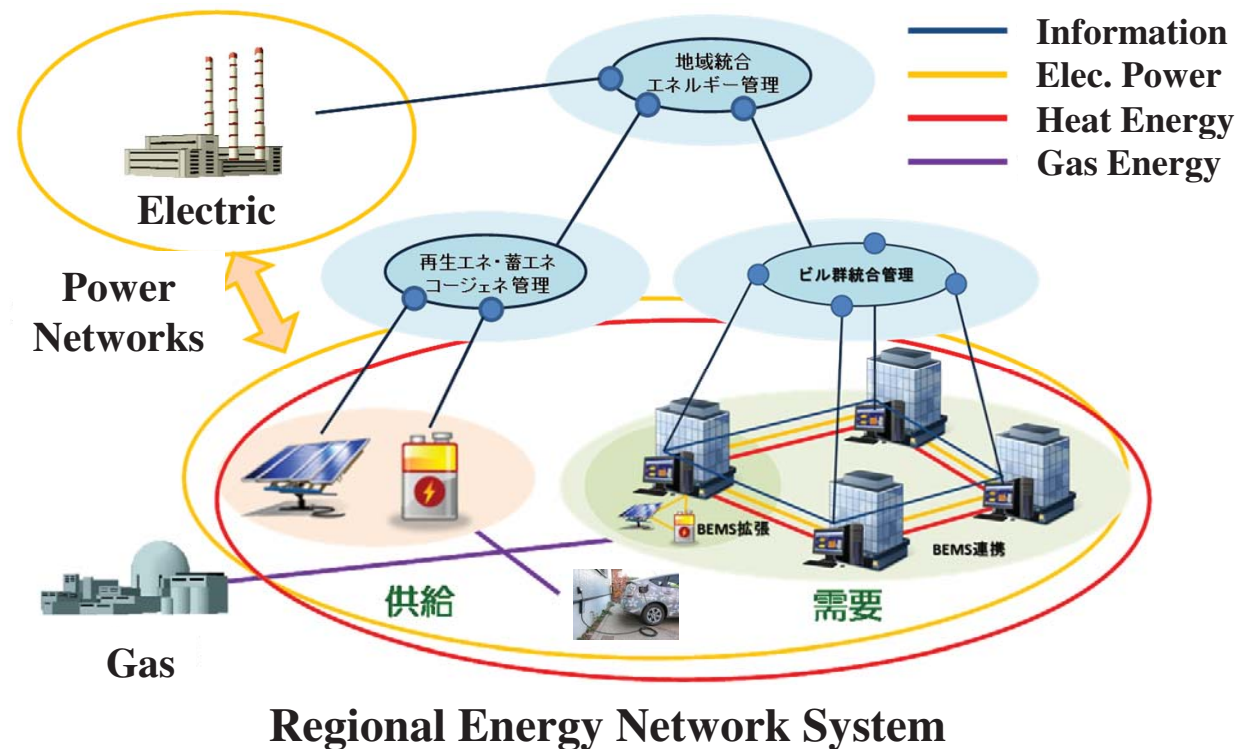

Hierarchical Bio-Network Systems

Integrated Energy Networks

Integrated Energy Network

Multi-resolved Hierarchical

Framework for Glocal Control

*Realization of Global Functions
by Local Measurement and Control*

Real World

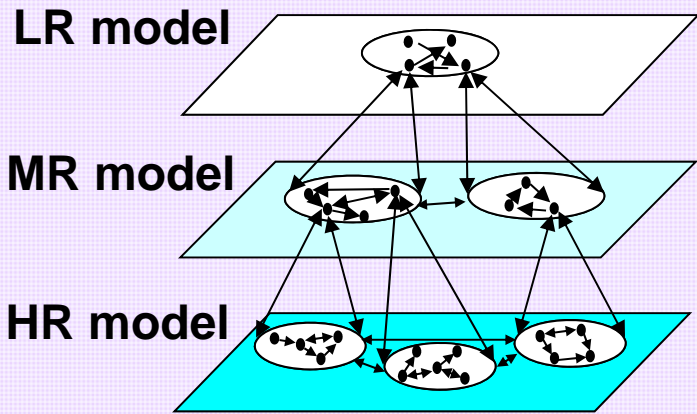

**Glocal Control

Scale of districts/towns

Possibility by Glocal Control

Hierarchical Air Conditioning (1/3)

Hierarchical Air Conditioning System

Area: Group of buildings

Building: Set of floors

Floor: Set of rooms

(with Azbil)

Energy saving (40%)
Heat island problem

Scalability

Hierarchical Air Conditioning (2/3)

Upper Layer : Energy Saving

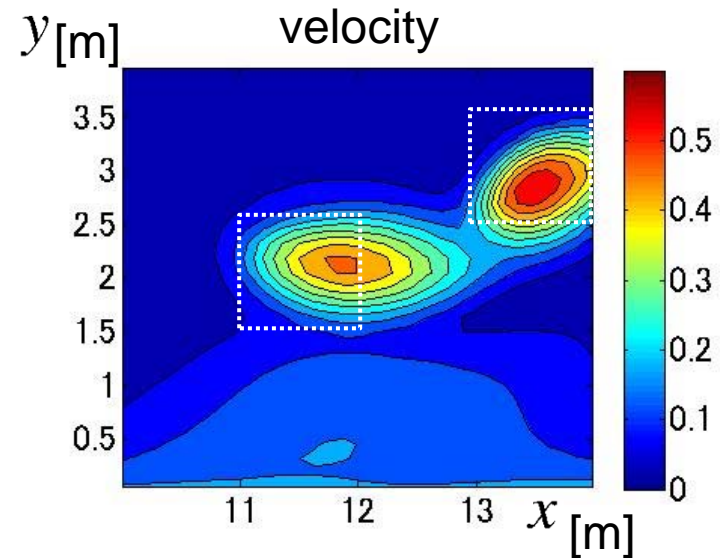

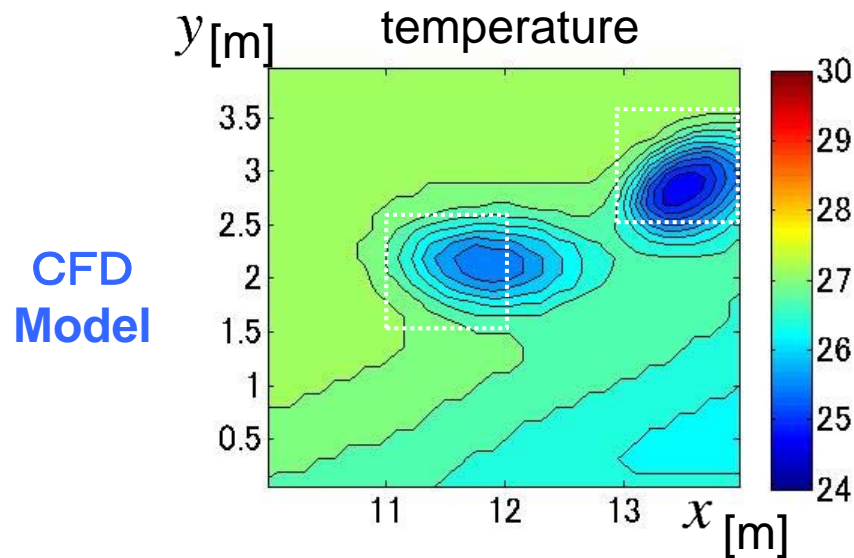

Lower Layer : Comfortableness

(with Azbil)

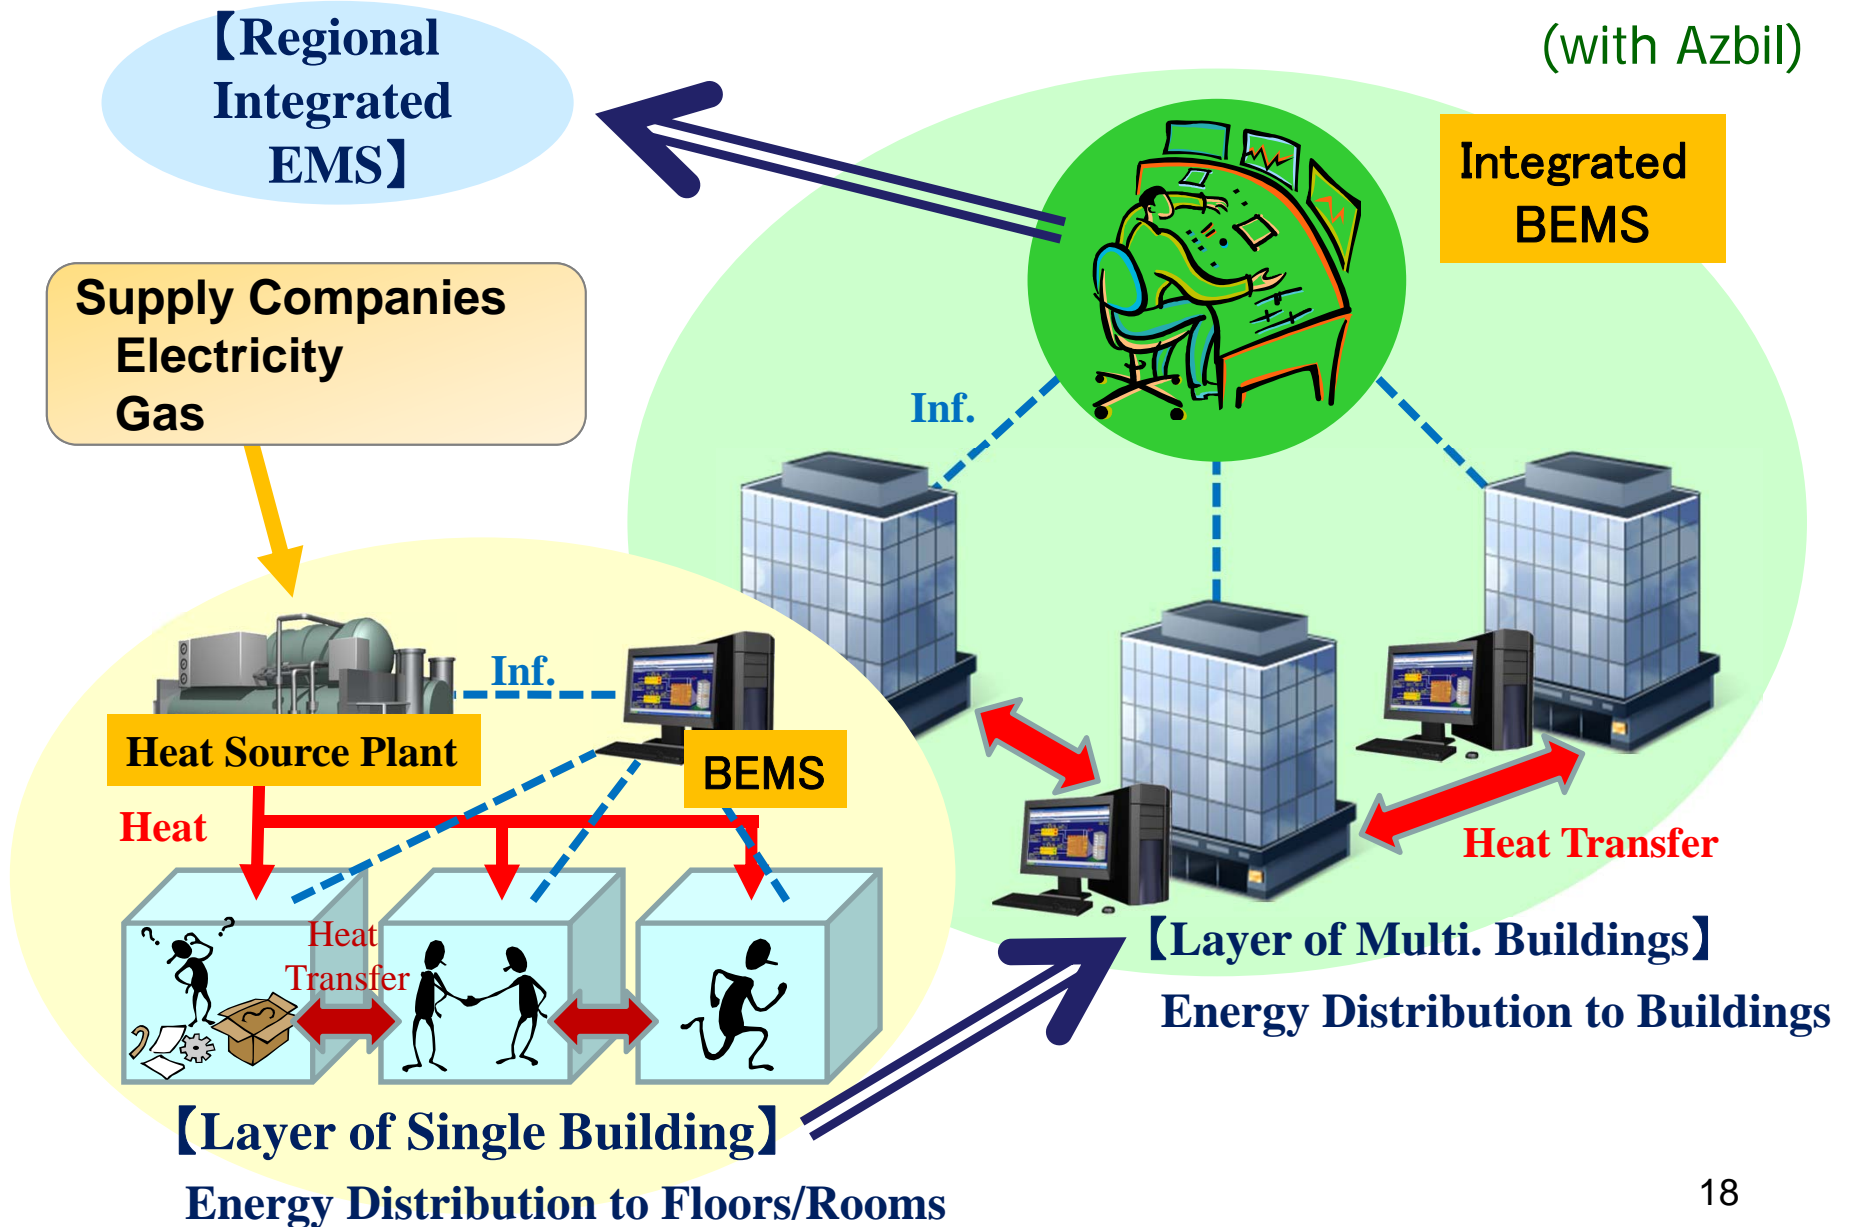

Hierarchical Air Conditioning (3/3)

(with Azbil)

Towards Regional Integrated EMS

OUTLINE : Part 1

1. Glocal Control & Energy Networks

- Glocal Control (background, idea, goal)
- Urban Heat Island Problem
- **Integrated Energy Networks**

Features of Energy & Water NWs

★ Energy & Water

- not uniformly distributed in time/space
- unbalance between demand & supply
 - **Control = balancing energy/water in time/space**
- but, transfer is very costly
 - **only local actions with exchanges in neighbors are available**
 - **shifting elements in time/space are important**

★ To reduce total energy

→ **Utilizing Nature & Control Strategy**

★ Key Points

- Hierarchical with Multi-resolution
- Aggregation & Distribution
- **Passivity**

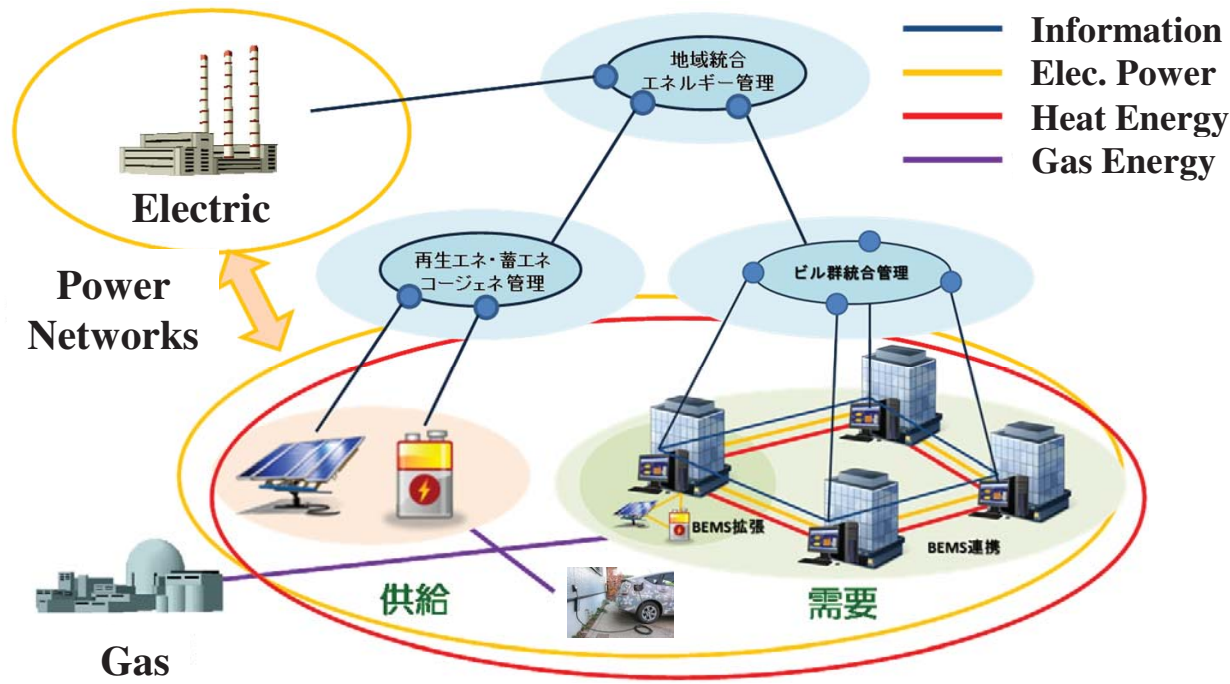

Integrated Energy Networks

Integrated Energy Network

Electric power network
+ Gas energy network
+ Heat energy network

**Air Conditioning
Systems**

**Thermal Energy
Transfer/Storage**

**Decentralized
Control**

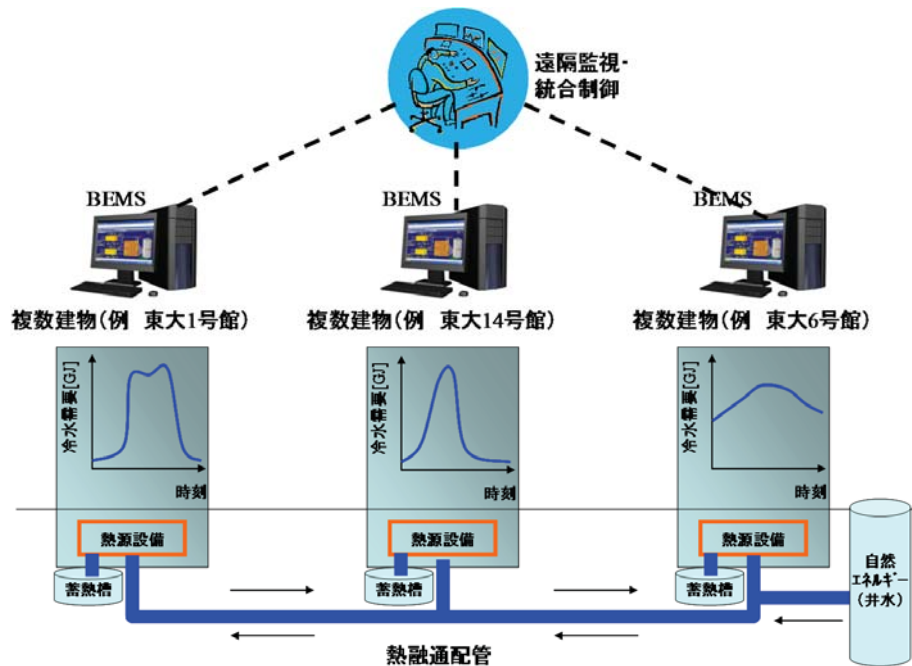

Towards Regional Integrated EMS

Integrated BEMS by Heat Transfer

(with Azbil)

Purpose
Energy Management Control
by Heat Transfer
with Thermal Energy Storages

Without Heat Transfer

With Heat Transfer

On Going Work

- 1) Hierarchical Modeling & Decentralized Control
- 2) Design Guideline for NWS (TESSs, GEs)

Features of Decentralized Control

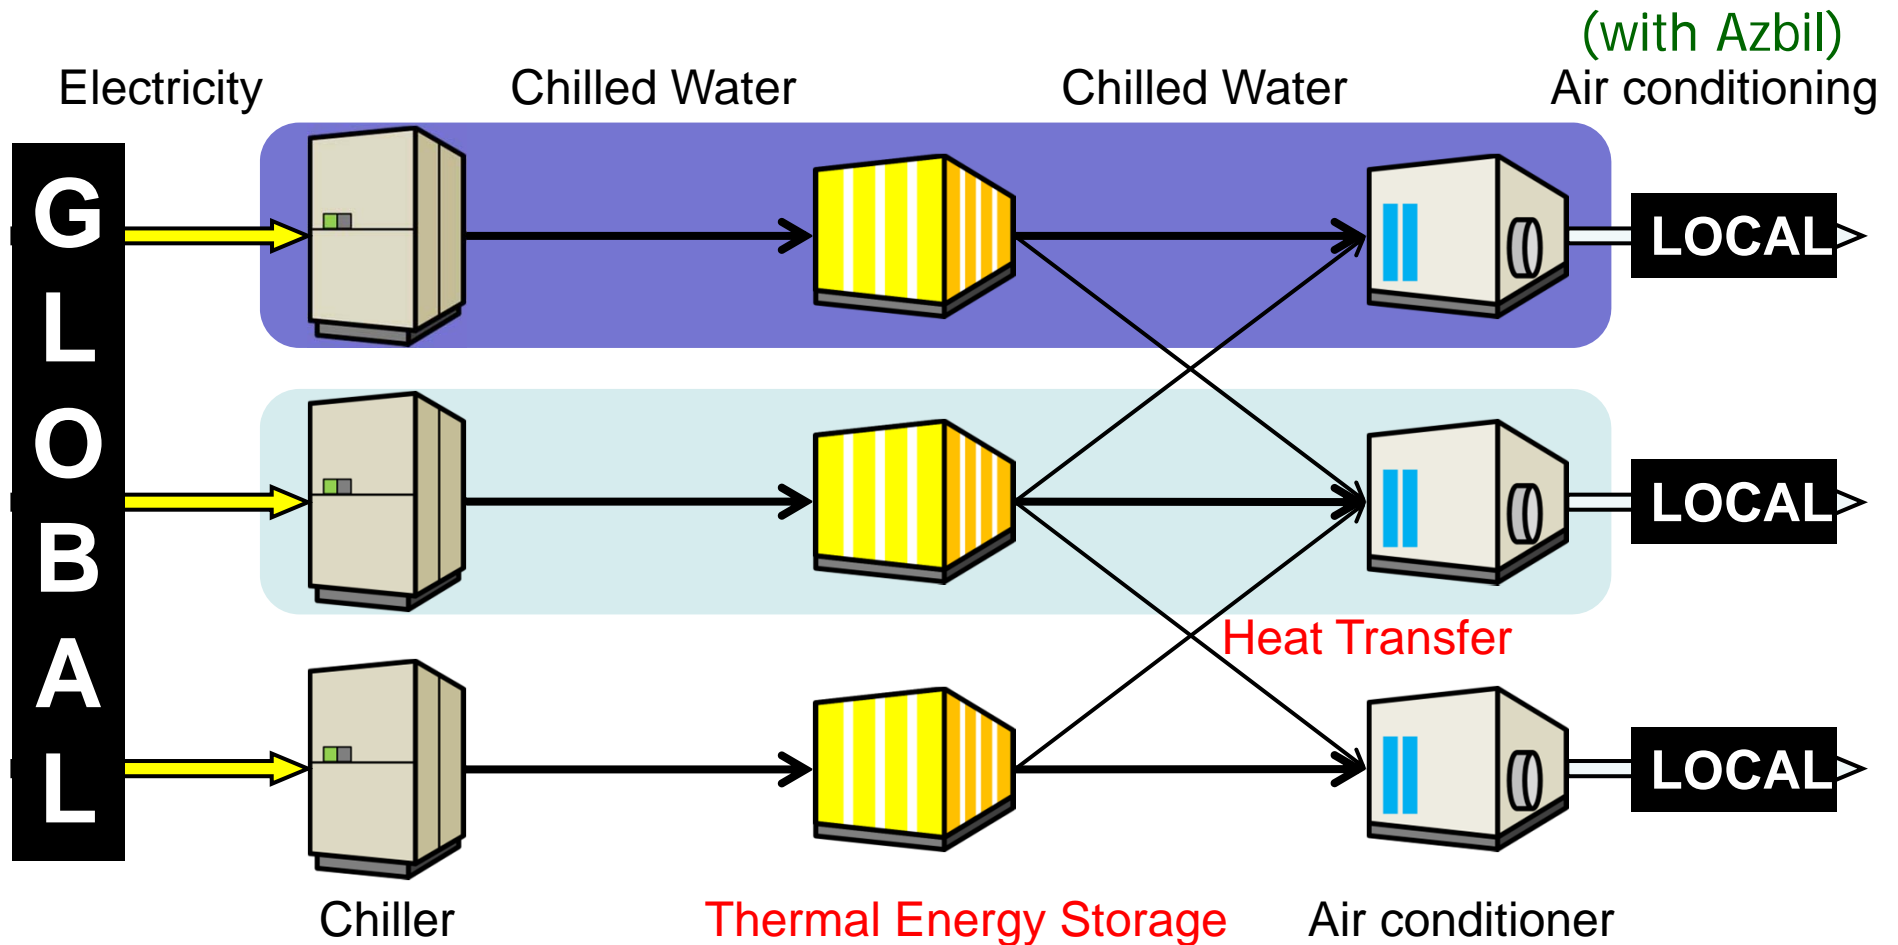

(with Azbil)

Advantages

- *Reduction of computation load* in each control device
- *Localization of confidential information* (e.g. facility information, energy consumption)
- *Adaptation capability* for facility replacement and performance degradation with updating of subsystems

Decentralized Control for Int. BEMS

Minimizing
Total Energy

Maximizing
Each Utility

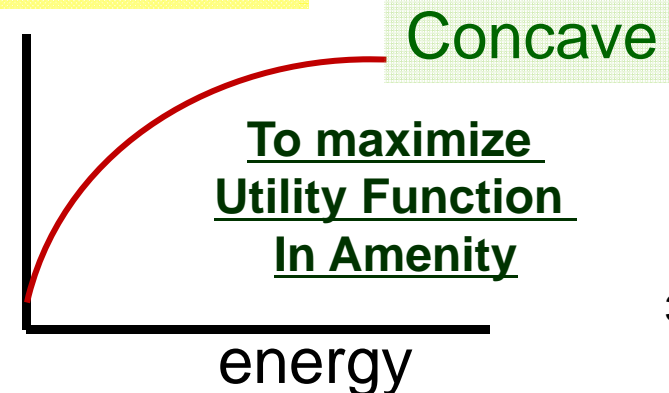

Modeling of Elements and Setting of Objective Functions

(with Azbil)

Modelling of Elements

Setting of Objective Functions

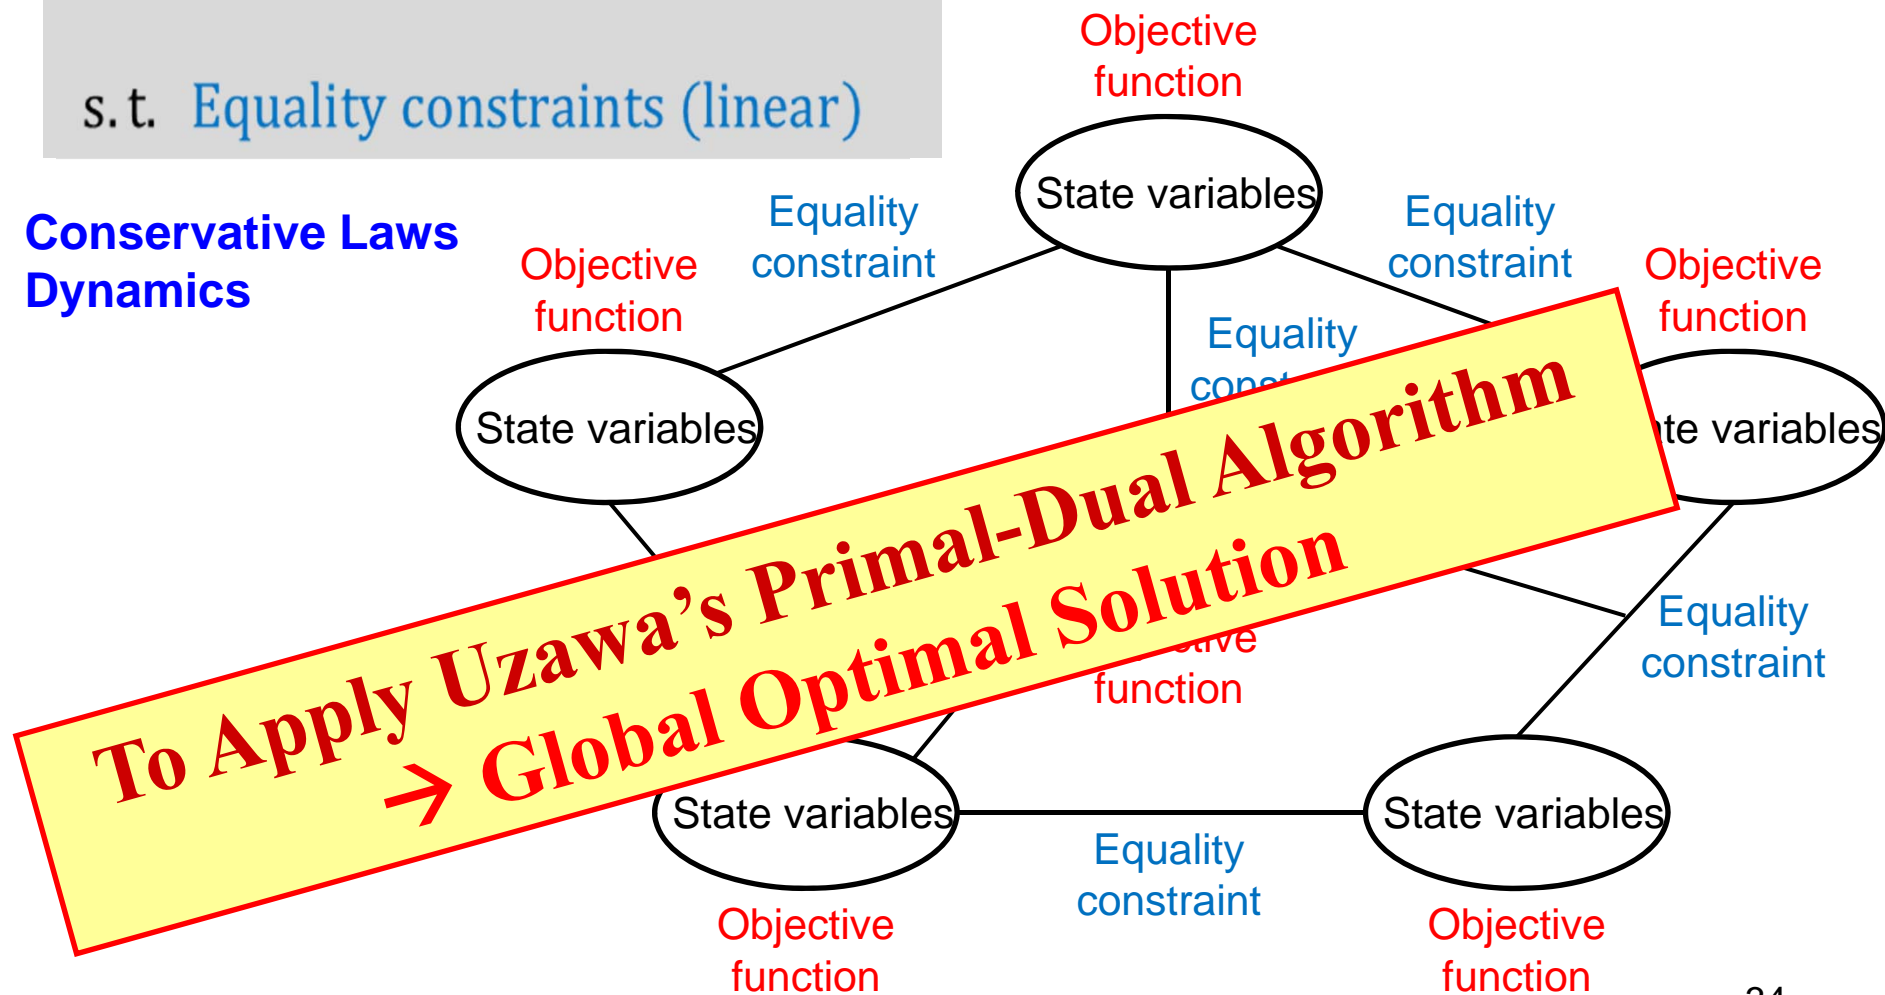

Decentralized Control : Optimization

(with Azbil)

$$\max_{\text{State variables}} \sum \text{Objective function}$$

s. t. Equality constraints (linear)

Conservative Laws
Dynamics

An Example : two buildings

(with Azbil)

$$\max \sum_h \sum_i (A_i(b_i[h]; h) - E_i(u_i[h]; h))$$

$$H = 24 \quad \Delta t = 1.0$$

$$\begin{bmatrix} 0.13 \\ 0.30 \end{bmatrix} \leq u[h] \leq \begin{bmatrix} 1.30 \\ 3.00 \end{bmatrix}$$

$$\begin{bmatrix} 0 & 0 \\ 0 & 0 \end{bmatrix} \leq v[h]$$

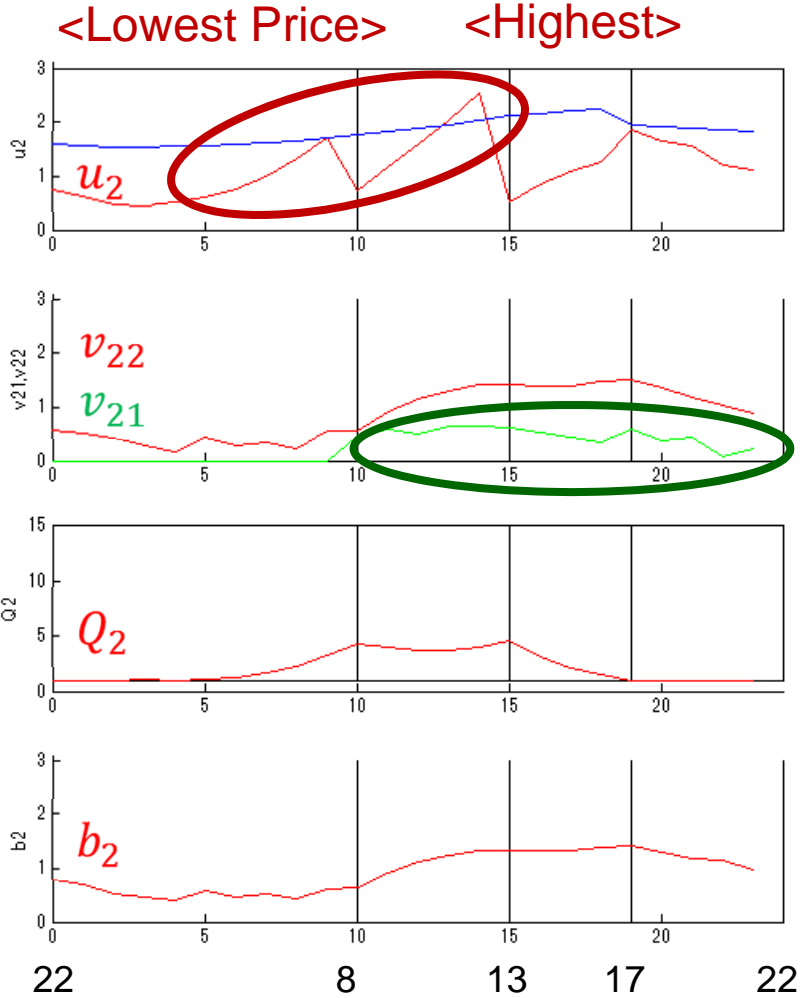

$$\begin{bmatrix} 1.0 \\ 1.0 \end{bmatrix} \leq Q[h] \leq \begin{bmatrix} 15.0 \\ 15.0 \end{bmatrix}$$

$$Q[0] = \begin{bmatrix} 1.0 \\ 1.0 \end{bmatrix}$$

$$A(b[h]; h) = -100(b - \text{demand})^2$$

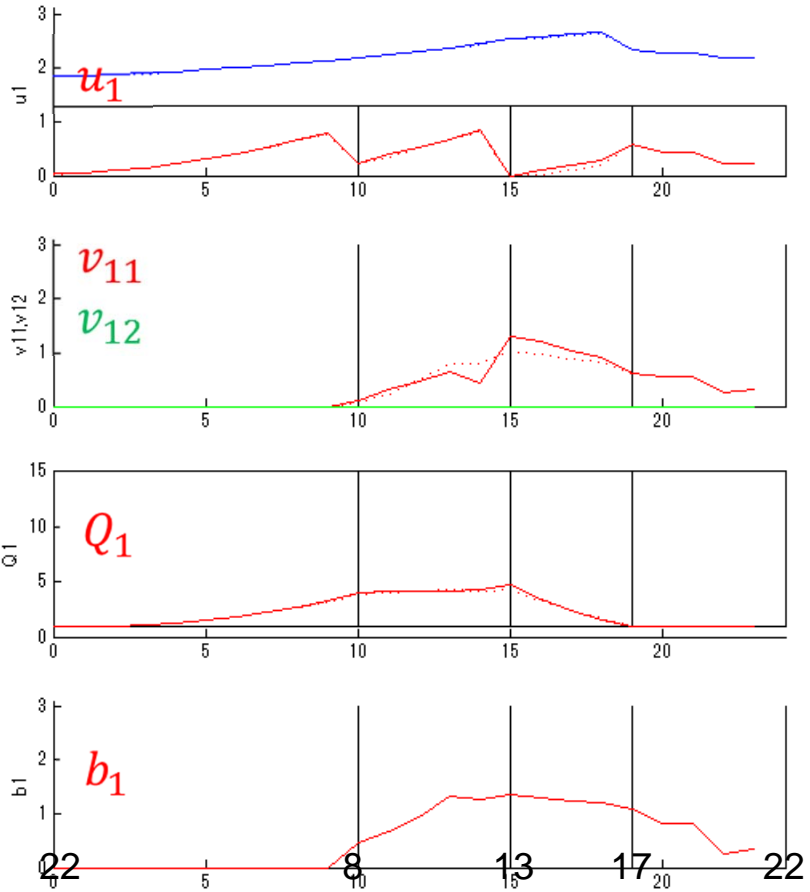

$$1 \leq Q_2 \leq 5$$

Enough Capacity

$$1 \leq Q_2 \leq 2$$

Limited Capacity

$$1 \leq Q_2 \leq 2$$

Limited Capacity

**Design Guideline of
Integrated Energy Networks from the View Point of
Hierarchical Decentralized Control**
